## Absolute Maximum Ratings

Parameter	Symbol	Description	Units	Notes
Voltage on VDD pin relative to Vss	$V_{DD}$	- 0.3 V ~ 1.5 V	V	1,2
Voltage on VDDQ pin relative to Vss	$V_{DDQ}$	- 0.3 V ~ 1.5 V	V	1,2
Voltage on VPP pin relative to Vss	$V_{PP}$	- 0.3 V ~ 3.0 V	V	3
Voltage on any pin relative to Vss	$V_{IN}, V_{OUT}$	- 0.3 V ~ 1.5 V	V	1,2

Notes:

1. Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
2. VDD and VDDQ must be within 300 mV of each other at all times; and VREFCA must be not greater than 0.6 x VDDQ, When VDD and VDDQ are less than 500 mV; VREF may be equal to or less than 300 mV
3. VPP must be equal or greater than VDD/VDDQ at all times

# DRAM Component Operating Temperature Range

Symbol	Parameter	Rating	Units	Notes
TOPER	Operating Temperature Range	-40 to 95	°C	1,2

Notes:

1. Operating Temperature TOPER is the case surface temperature on the center/top side of the DRAM. For measurement conditions, please refer to the JEDEC document JESD51-2.
2. The Normal Temperature Range specifies the temperatures where all DRAM specifications will be supported. During operation, the DRAM case temperature must be maintained between -40°C~95°C under all operating conditions.

**Industrial Temperature:**

The industrial temperature device requires that the case temperature not exceed -40°C or +95°C. JEDEC specifications require the refresh rate to double when TC exceeds +85°C; this also requires use of the high-temperature self refresh option.

- ◆ MAX operating case temperature. TC is measured in the center of the package.
- ◆ A thermal solution must be designed to ensure the DRAM device does not exceed the maximum TC during operation.
- ◆ Device functionality is not guaranteed if the DRAM device exceeds the maximum TC during operation.
- ◆ If TC exceeds +85°C, the DRAM must be refreshed externally at 2X refresh, which is a 3.9µs interval refresh rate.

# Operating Conditions

## Recommended DC Operating Conditions – DDR4 (1.2V) operation

Symbol	Parameter	Rating			Units	Notes
		Min.	Typ.	Max.		
VDD	Supply Voltage	1.14	1.2	1.26	V	1,2,3
VDDQ	Supply Voltage for Output	1.14	1.2	1.26	V	1,2,3
VPP	Activation Supply Voltage	2.375	2.5	2.75	V	3

Notes:

1. Under all conditions VDDQ must be less than or equal to VDD..
2. VDDQ tracks with VDD. AC parameters are measured with VDD and VDDQ tied together.
3. DC bandwidth is limited to 20MHz.

## Environmental Requirements

Symbol	Parameter	Rating	Units	Notes
HOPR	Operating Humidity (relative)	10 to 90	%	
TSTG	Storage Temperature	-50 to +100	°C	1
HSTG	Storage Humidity (without condensation)	5 to 95	%	1
PBAR	Barometric Pressure (operating & storage)	105 to 69	kPa	1,2

Notes:

1. Stresses greater than those listed may cause permanent damage to the device. This is a stress rating only, and device functional operation at or above the conditions indicated is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
2. Up to 9850 ft.
